THE YORK UNIVERSITY/TORONTO STAR SURVEY

THE GROWING INCOME INEQUALITY GAP IN CANADA: A NATIONAL SURVEY

Growing income inequality in Canada has been at the forefront of recent public debate. It has been a key driver of recent policy developments in areas such as minimum wage rates, labour market regulations, and skills training. Although expert opinion on income inequality is well canvassed, little is known about what ordinary Canadians think about the growing income inequality gap, its significance, its causes, the impact on their life prospects and opportunities, and the policy options available to the Federal and provincial governments. This is surprising because the income gap is likely to be a central theme in a series of upcoming elections.

The York University/Toronto Star national survey of 1800 Canadians, conducted by York's Institute for Social Research, provides a snapshot of the concerns and issues Canadians believe the growing income inequality gap gives rise to. The survey allows for regional comparisons as well as other comparisons based on demographics and party identification.

The Institute for Social Research at York University houses the largest university-based survey research centre in Canada. It conducts across the country many major survey research projects by telephone, mail and the web, in research areas that include population health, education, social service delivery, gender, the environment and voting behaviour. ISR also undertakes a range of qualitative research, including focus group studies, provides expert consulting in social statistics, and operates York's Statistics Canada Research Data Centre.

MAJOR FINDINGS

THE INCOME GAP

- close to eight of every ten Canadians (77.7%) think the income gap has grown in the last 5 years and 40% think the income gap has become much larger

LAST FIVE YEARS INCOME GAP IN CANADA HAS BECOME:

- there is no real variation in the likelihood of saying the income gap has become worse by gender, being born in Canada or elsewhere and whether or not the person works for pay
- while there is some variation in views on the growth of the income gap by age, education, income, region and political party identification, it is also the case that at least 70 percent of every group examined think that the income gap has become larger in Canada in the last five years
- concern about growth in the income gap is Canada wide and deeply rooted, there are few social or political issues in Canada where so many Canadians from all parts of the country, young and old, rich and poor, men and women are in agreement
- 70% of Canadians think growth in the income gap has made Canada a less fair society and even a higher proportion of those who think the gap has become much bigger (80%) think Canada has become a less fair society

INCREASING INCOME GAP HAS MADE CANADA A LESS FAIR SOCIETY

REDUCING THE INCOME GAP

- 75% of Canadians felt that increasing the minimum wage would reduce the income gap
- the same percentage of Canadians (75%) felt that getting a university education would reduce the likelihood of having a low income

THE GROWTH OF THE INCOME GAP BY SELECTED SOCIO-DEMOGRAPHIC CHARACTERISTICS

- while there are limited differences in the extent to which Canadians think the income gap has grown in the last five years according to various socio-demographics characteristics there is variation in the likelihood of saying the income gap has become *much bigger* (as opposed to much bigger and somewhat bigger)
 - the likelihood of saying the gap has become *much bigger* increases with age: the percentage saying it has become much bigger are: 22, 34, 48, and 50% for the following for age groups (less than 35, 35 to 49, 50 to 64 and 65 and older) respectively

INCOME GAP HAS BECOME MUCH BIGGER BY AGE GROUP

- Conservatives (33%) and Liberals (37%) are much less likely to say the income gap has become much bigger than those who identify as NDP supporters (50%)

INCOME GAP HAS BECOME MUCH BIGGER BY POLITICAL PARTY IDENTIFICATION

- while those with yearly incomes less than \$30,000 and those with yearly incomes more than \$80,000 were equally likely to say the gap had become bigger over the last five years, those with lower incomes were significantly more likely to say the gap had become much larger (51%) than those with higher incomes (33%)
 - a related finding is that with higher education (35% to 39%) were less likely to say the gap had become much bigger than those with lower levels of education (44% and 46%)
- a clear majority of Canadians (55%) are worried about their financial security and an even a higher number - 67% - are worried about the children's financial future
- while 30 of Canadians reported they lost or changed jobs in the last five years, 25% of them reported their new job was worse as it had a lower salary and or benefits

EXPLAINING THE INCOME GAP

- when asked about cause for the growth of the income gap two factors stand out: loss of jobs and increasing salaries to business leaders
 - 69% of the Canadians surveyed said there were just not enough jobs that paid a decent wage and 58% identified the lost of jobs to countries that pay low wages as major reasons for the growth of the income gap
 - increasing salaries to business leaders were seen as major reason for the growth of the income gap by two-thirds of Canadians (65%)
- changes in government policies such as Employment Insurance and Old Age Security were seen as a major reason for the increase in the income gap by 41% of the survey respondents
 - many fewer Canadians, felt unions (26%) or immigrants (30%) were responsible for the growth in the income gap, these numbers are less than half as substantial as those for job losses and business leaders salaries

PERCENT SAYING EACH OF THE FOLLOWING IS A MAJOR REASON FOR THE INCOME GAP

WHAT THE GOVERNMENT COULD DO AND WHAT THEY HAVE DONE

- one in every two Canadians believe that their federal and provincial governments could do a lot to reduce income inequality, indeed about 80% of Canadians think the federal and the provincial government could “do a lot” or something to help reduce income inequality (with about 15% saying there “is little” governments could do and 5% saying there is “nothing at all” they could do)
- while about half of Canadians think there is “a lot” the federal and provincial could do in reducing income inequality about 5% think the government has done “a lot,” and about 60% of Canadian think the federal and provincial government has done “a little” or “nothing at all”
- the size of the gap between Canadian beliefs of what their governments could do and actually do to reduce income inequality is huge, we would not be surprised if this gap contributes to a lack of confidence in government institutions
- about the same number of Canadians who think governments could do a lot to reduce inequality among Canadians think Business and Private Sector (51%) could do so
- only a limited percentage of respondents (28%) felt that unions could do a lot to reduce inequality

REGRESSION RESULTS

REGRESSION MODEL RESULTS FOR FACTORS ASSOCIATED WITH THE PERCEPTION OF INCOME GAP IN CANADA

Factors associated with the perception that the income gap in Canada in the last five years has become bigger or smaller are listed below. These results were obtained using regression models with the following explanatory (or predictor) factors or variables:

i) gender, ii) employment status, iii) birthplace, iv) income, v) education, vi) region in Canada, vii) political party inclination, and viii) age.

The results below need to be viewed in the context of being controlled for all the seven other explanatory factors or variables mentioned above. In other words, the results are holding all else equal, or taking into account, the other explanatory factors or variables.

- As age increased, people tended to view the income gap as bigger.
- Persons with less than high school education tended to view the income gap as smaller compared to those with at least high school education.
- People in Ontario tended to view the income gap as bigger compared to those in Manitoba and Saskatchewan.
- People whose political party identification or inclination was Liberal and, more so, Conservative tended to view the income gap as smaller compared to those whose political party identification or inclination was N.D.P.
- Gender and employment status were not found to be factors associated with people's perception of the income gap getting bigger or smaller.
- People born in Canada, and also people with lower income, may view the income gap as bigger, but these regressions were not conclusive on these points (in the context of taking into account all the other explanatory factors mentioned above).

TABLE: REGRESSION MODEL COEFFICIENT ESTIMATES^a

Factor or Variable	Coeff. Estimate	Std. Error	Hypothesis Test		
			t	df	p
(Intercept)	2.729	.236	11.553	14260	.000
Gender: male	.011	.061	.183	14260	.855

Income: <\$30,000	-.011	.115	-.098	14260	.922
Income: ≥\$30,000 and ≤\$80,000	-.133	.070	-1.893	14260	.059
Income: >\$80,000	.000 ^b
Educ.: university degree	-.249	.139	-1.797	14260	.072
Educ.: post high school	-.244	.132	-1.846	14260	.065
Educ.: high school	-.340	.135	-2.511	14260	.012
Educ.: less than high school	.000 ^b
Region: Atlantic	.098	.078	1.258	14260	.209
Region: Quebec	.235	.098	2.411	14260	.016 ^c
Region: MB and SK	.246	.106	2.322	14260	.020
Region: Alberta	.049	.086	.571	14260	.568
Region: BC	.002	.076	.023	14260	.982
Region: Ontario	.000 ^b
Party: Liberal	.206	.096	2.146	14260	.032
Party: Conservative	.255	.097	2.634	14260	.009
Party: Other	.082	.101	.807	14260	.420
Party: N.D.P.	.000 ^b
Age (in years)	-.011	.002	-5.117	14260	.000

a. Model: Last five years, income gap in Canada has become = (Intercept) + gender + employ + birthplace + income + education + region + party + age. The income gap variable was coded: 1 much bigger, 2 somewhat bigger, 3 stayed about the same, 4 somewhat smaller, and 5 much smaller. This variable is an ordinal variable which may also be plausibly considered as an equally spaced scale/continuous variable, so both an ordinal logistic regression and a multiple linear regression were performed as a check. The results were quite similar. The multiple linear regression results are shown above.

b. Set to zero because this parameter is the base (comparison) category.

c. The corresponding p-value in the ordinal logistic regression was .130.

HOW WE DID THE SURVEY

Telephone interviews were completed by the Institute for Social Research (ISR) at York University using Computer-Assisted Telephone Interviewing (CATI) software from the Computer-assisted Survey Methods (CSM) Program at the University of California, Berkeley. Pretesting was completed in late December 2013 and data collection was completed between January 3 and January 22, 2014.

A list of residential telephone numbers in Canada was used as a surrogate for a list of households in Canada. By randomly selecting telephone numbers, we had a random selection of households. When more than one person 18 years of age lived in a household, the interviewer randomly selected an adult in the household as the survey respondent. In addition to randomly selecting residential numbers, interviews were also attempted with a sample of 1,200 cell phone numbers. Just under 10% of the interviews were completed with cell phone users.

The distribution of the sample among the provinces was designed to allow for regional comparisons. The number of interviews in each region and the sample error for each region are detailed in the table below.

Region	Number of Interviews	Sample Error
Atlantic	364	5.1%
Quebec	311	5.6%
Ontario	556	4.2%
Manitoba and Saskatchewan	172	7.5%
Alberta	227	6.5%
British Columbia	268	6.0%
Total	1,898	2.2%

The data were weighted to correct for the over representation of the smaller regions and to correct for the unequal probabilities of selection within households. (An adult in a one adult household has a 100% of being selected for the interview whereas an adult in a two adult household has a 50% chance, etc.). The complex sample procedure in SPSS was used for analyzing the data.

Interviews were completed in English and French. All interviewing was completed from ISR's in house survey centre. The interviews took, on average 10 minutes to complete.

INCOME GAP QUESTIONNAIRE

(EASY TO READ VERSION)

>Q1<

In the last five years do you think the income gap in Canada has become much bigger, somewhat bigger, stayed about the same, become somewhat smaller, or become much smaller?

>Q2A< [skip q2 if think gap is decreasing]

I am going to read you a list of things that might have helped to cause the growing income gap. For each please tell us if you think it is a major reason, a minor reason or not a reason for the income gap.

The loss of jobs to countries that pay lower wages?

>Q2B<

Increasing salaries for business leaders?

>Q2C<

Decline in unionization?

>Q2D<

Decline in the number of jobs that pay a decent wage?

>Q2E<

Increased immigration?

>Q2F<

Changes in government programs such as Employment Insurance and Old Age Security?

>Q3<

Which of the following best describes your financial circumstances: are you well off, are you getting ahead, are you just getting by, or are you falling behind?

>Q4<

Do you worry about your financial security in the future?

>Q5<

What about your children? Do you worry about your children's financial security in the future?

>Q6A<

Please tell us if you strongly agree, somewhat agree, somewhat disagree or strongly disagree with the following statements.

An increase in the minimum wage would reduce the income gap?

>Q6B<

Obtaining a university education will reduce the likelihood of having a low income.

>Q6C<

Increasing income inequality has made Canada a less fair society.

>Q7A<

How much COULD each of the following do to reduce income inequality: would you say a lot, some, a little, or nothing at all?

How about the federal government? How much COULD they do: a lot, some, a little, or nothing at all?

>Q7B<

And how much is the federal government doing: a lot, some, a little, or nothing at all?

>Q7C<

How much COULD the provincial government do to reduce income inequality?

>Q7D<

And how much are they doing: a lot, some, a little, or nothing at all?

>Q7E<

How much COULD businesses and the private sector of the economy do to reduce income inequality?

>Q7F<

How much COULD unions do?

>YRBIRTH< [define <r><9999>]

These last questions will help us make sure we have a good representation of all adults in [fill PROVINCE] and help us analyze the results of the survey.

In what year were you born?

>BIRTH_CO<

In what country were you born?

>EDU<

What is the highest level of education you have completed to date?

>EMPLOY<

What is your present employment status: are you self-employed, working for pay full-time, working part-time, unemployed, a student, retired, or taking care of a family?

>RETIRE< (if retired at employ)

How many years ago did you retire?

>JOB_LOSS1<

Have you lost or changed your job in the last five years?

>JOB_LOSS2<

When it comes to wages and benefits is your new job better, worse, or about the same as your old job?

>PP_ID1<

Do you usually think of yourself as a: Liberal, Conservative, N.D.P, or Green Party supporter?

>PP_ID2< [if no party in previous question]

If you had to choose, which party comes closest to your views?

>HH_SIZE1<

COUNTING YOURSELF, how many people LIVE IN your household?

>HH_SIZE2<

How many people in your household are 17 years of age or younger?

>INCOME<

Could you please tell me if your total household income is below 30 thousand dollars, between 30 and 80 thousand dollars, or more than 80 thousand dollars?

>PCODE<

Can you tell me your postal code please?
